

# LAW PreDiscovery™

LAW PreDiscovery software is a full-featured production-level imaging and electronic discovery solution for law firms and service bureaus. Popular features include support for more than 100 scanners, the ability to build cases around existing image sets, new filtering capabilities for faster searching and culling, and an enhanced query builder, which allows you to save queries and search history.

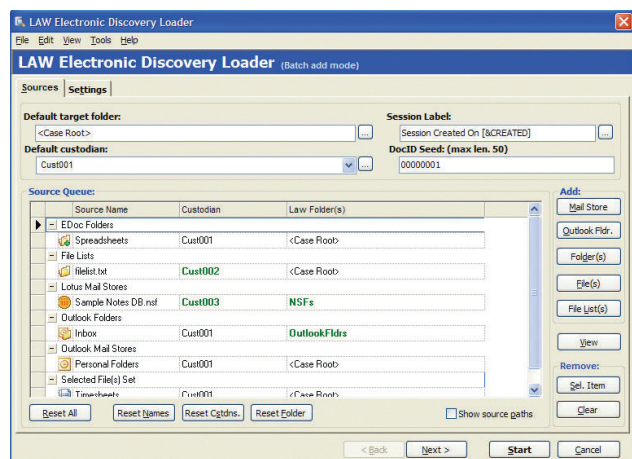

## Document Acquisition

### Electronic Discovery Loader

- Process mailstores, eDocs, file lists and Microsoft® Outlook® folders simultaneously
- Perform MD5 or SHA-1 hash deduplication
- Extract text and metadata

### Advanced Quality Control

- Launch native files through any installed application
- New quick-filtering options in grid displays
- Enhanced Query Builder includes saved queries and search history
- Boolean field creating and hotkey tagging

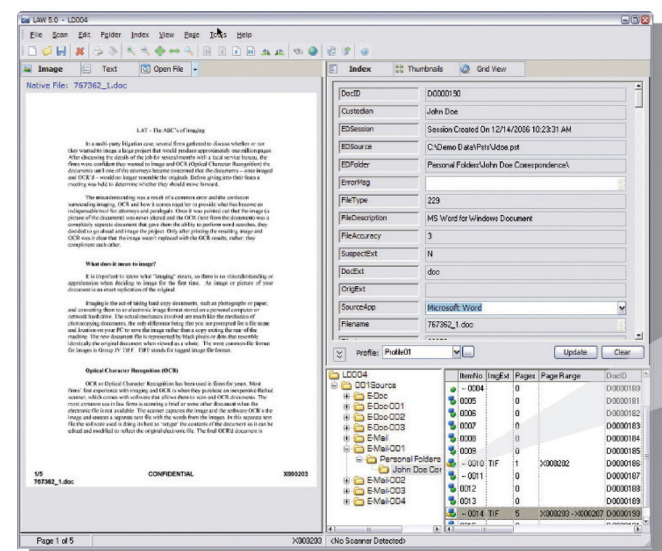

## Enhanced User Interface

### Enhanced User Interface

- Document lists contain colour-coded indicators showing native file, image and text states of each document
- Adjustable toolbars

### Easier Control of Projects

- Enhanced “New Case” dialog allows users to apply case descriptions and assign cases to clients or projects
- “Open Case” dialog now allows easy searching and retrieving of cases, location of active and recent cases, and purging of old cases from the case list

## LAW PreDiscovery™ Features

### Intuitive Interface

- Store and manage discovery through one easy-to-use interface
- Customize the interface to suit anyone from entry-level users to advanced users

### Case Creation

- Name cases
- Apply descriptions
- Assign the case to a client or project
- Locate previous cases or projects with ease

### Document Acquisition

- Load Electronic Discovery
- Extract text and metadata
- Process mailstores, e-docs, file list and Outlook folders simultaneously
- Perform MD5 and SHA1 hash deduplication
- Create file type filters

### EDD Review and Management

- Index and code
- Create index display profiles
- Display index view or grid view
- Group documents by type
- Filter specific file types for more controlled document processing
- Tag specific documents for processing using mouse, keyboard or batch update
- Create different groups for specific file types to streamline the process of creating TIFF files

### Batch Process

- Bates number
- OCR
- Endorse
- Print to paper
- Convert to TIFF
- Distributed batch processing

### Scanning

- Support for more than 100 scanners

### Search

- Build Boolean queries
- Save queries for future use
- Search extracted and OCR text

### EDD Export

- Build load files
- Push records directly into Concordance® and Summation® databases
- Save and reuse settings as export profiles
- Export electronic discovery (native files and/or images), scanned images or both in a single export
- Directly write records to Concordance and Summation databases
- Save export settings via profile creation
- Customize naming for file and folders for each export file type: native, image and text

### Hardware Specs

- 1.7 GHz Processor Speed
- 512 MB RAM
- 100 MB hard drive for application (Extra hard drive space is needed for documents and images depending on workload and image formats)

### Supported Operating Systems

- Microsoft® Windows® 2000 Pro Service Pack 4
- Windows XP Service Pack 2

### Database Support

- Microsoft® Access®
- Advantage Database Server
- SQL 2000 Server or SQL MSDE
