

# Integrate Your Efforts with LAW PreDiscovery™ and Concordance®

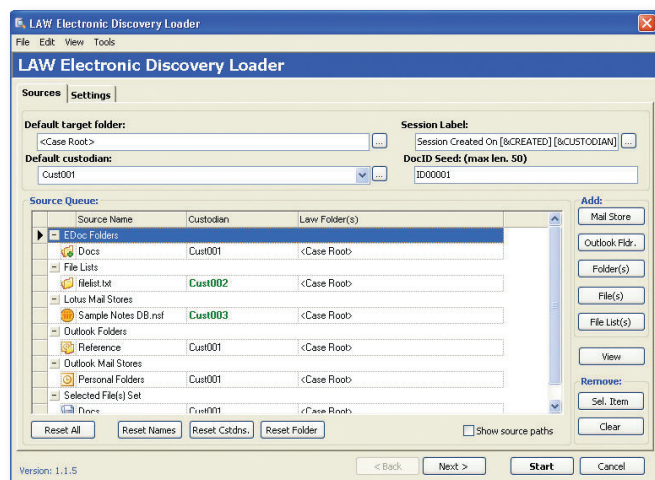

## Control your electronic discovery, so it doesn't control you.

The exceptional integration of LAW PreDiscovery™ electronic discovery and imaging software and Concordance® litigation document management software gives legal professionals the pieces they need to solve the discovery puzzle.

Users now have the ability to load, cull, convert, review and produce documents quickly and easily. This powerful combination of software significantly reduces the time previously needed to manage discovery files—giving you control over the quality, accuracy and cost of your discovery like never before.

## Step 1 Document Acquisition

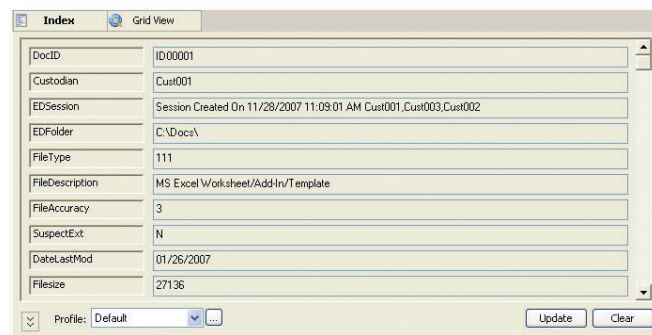

In your practice you receive dozens, even hundreds of banker boxes and CDs pertaining to just one case. To find out what is on them and the relevance they hold, begin by using LAW PreDiscovery to create a new case.

Import raw TIFFs and load files, scan paper documents, and native electronic files from any media such as CDs and DVDs—with ease. LAW PreDiscovery supports more than 100 scanners and over 200 electronic file types.

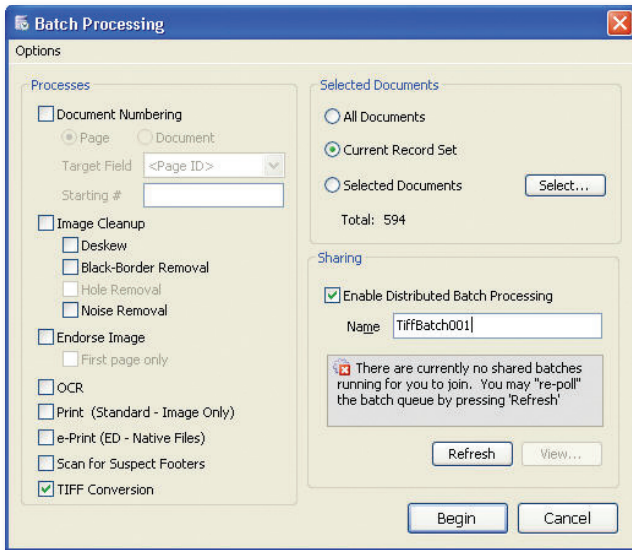

Next, extract text and metadata and perform MD5 and SHA1 hash deduplication to help ensure you aren't reviewing and producing any more documents than needed. All from a single, simple-to-use interface.

## Step 2 Electronic Discovery Management

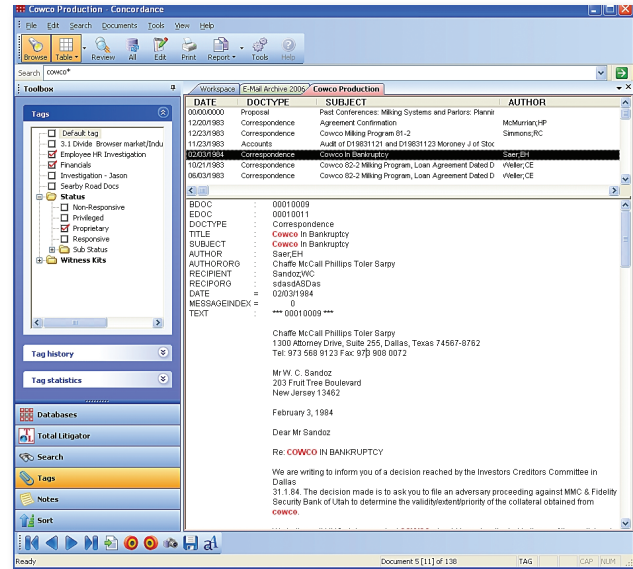

For even more controlled document processing, LAW PreDiscovery makes it simple to index, code, filter and tag files. Enhanced filtering capabilities allow for faster, more effective searching and culling.

## Step 3 Batch Process TIFF or PDF Documents

Once you've selected your document set, LAW PreDiscovery quickly converts to TIFF or PDF and creates a Concordance database or load file on the fly, so it's automatically ready for review in Concordance and Concordance® Image, the image and production management software.

## Step 4 Review in Concordance

Concordance has a massive database capacity and a highly intuitive interface, so you can quickly review and select your critical case documents, as well as view, edit and produce the TIFF images with Concordance Image.

Improved organizational tools, such as multi-level folders, public/private tag groups and document review statistics, streamline case management and trial team collaboration.
