

LAW PreDiscovery™

LAWtsi (touch screen interface)

Speed and efficiency at your fingertips!

LAWtsi allows customers to use their multi-function devices or desktop scanners to scan directly into existing LAW PreDiscovery cases. LAWtsi uses touch screen control technology to mimic interfaces similar to those found on digital copiers. Ease-of-use and seamless integration with existing LAW PreDiscovery projects makes LAWtsi the most affordable and practical solution available for the litigation imaging market.

LAWtsi allows users to leverage the existing investment they have made in multi-function devices by using these devices as high-speed scanners. Many of these devices can provide a higher throughput than desktop scanners and allow sites to double or triple their throughput versus using their desktop scanners alone.

Bringing the power of LAW PreDiscovery to your multi-function devices

Features:
